

DIGITAL IMAGE STORAGE SYSTEM

Abstract of the Disclosure

A digital image storage system includes a digital camera having a memory capable of storing digital images and an adapter on which the digital camera is to be laid down—for informing the adapter of the digital images in the memory. The digital image storage system further includes a data storage having a storage medium that stores the digital images informed through the adapter. The data storage is in cooperation with the digital camera by way of the adapter to delete a digital image from the memory of the digital camera in case of the digital image completely informed and stored in the storage medium.
